

I AM....

Kyle Bibler
RHS Class of 2012

A Graduate of
Campbell County
Public Schools

I graduated from Rustburg High School in 2012, and went on to earn my BS in Computer Science from the University of Virginia in 2016. I am currently working as a technical solutions consultant at Google. My current position is with the Google Express team. My role thus far has been to incorporate machine learning into creating or improving processes and systems within the team. Basically, I write code to automate things that are very slow, manual, and boring. I plan to continue to grow my technical skills at Google. It is a great place to work with a lot of perks and more importantly career flexibility. Google is a great company to work for mostly for the culture. Some of the friendliest people you will ever meet work here, and people work hard to be inclusive and helpful at every opportunity. The mood around the workplace is also very laid back. I am able to come in at very flexible hours, or leave at a moment's notice because people can trust me (and other coworkers) to get their work done. Other than that, the usual perks of Google apply - basically unlimited free food, on campus gyms (also free), buses to work, and a bunch of other things.

Before taking AP Computer Science, I had very little experience with computer programming. I am glad I did because I instantly fell in love with programming. Although it was only one year, and it only became available starting my senior year (lucky me!). I think just the concept of programming was something that instantly clicked with me. I loved having the ability to have a cool idea and be able to build it out and have the results there instantly, only by typing. Bringing a concept to a working prototype, whether it was a game or a website or an app, was basically one big puzzle, and I love puzzles. If this course had not been offered, I don't know if I would have pursued Computer Science in college. It was awesome that Campbell County Public Schools provided this opportunity for me and other students because it wasn't something that many people would have gotten experience with otherwise, and it has definitely changed my life for the better.
